RAUMINSTALLATION, OFFENBACH, 2016

Scale Scale Scale (2016) Offenbach

In 2016, Scale Scale Scale, an expansive installation realised in collaboration with the artist collective D665, opened the second exhibition at the Kressmann-Halle in Offenbach. The work grew out of a joint theoretical engagement with the function and aesthetics of the exhibition spaces that YRD.Works had built a few months earlier. How do spaces created for art or theatre work? By what criteria are they dimensioned? And what effect do spatial conditions have on viewers?

In Scale Scale Scale, YRD.Works developed an intervention that literally focused on the scale of the Kressmann-Halle. To do so, they divided the 160 m_2 hall, which they had built as an exhibition space a few months earlier, into ten individual rooms using temporary plasterboard walls. The sequence consisted of five wider, unlit rooms alternating with five narrower, lit ones.

What was unusual about the larger rooms was that they resulted from scaling up the cavity inside a plasterboard partition. In Scale Scale Scale, this in-between space was inflated into a room-filling place in which one could spend time. Technical and functional elements such as support structures, sockets or radiators, which in traditional exhibition concepts like the white cube are hidden inside the walls, were deliberately placed in view in the enlarged cavities. Adjacent to the dark rooms, the collective built narrow, white-painted rooms lit by artificial light, which resulted from scaling down the actual exhibition space. The original exhibition space was thus pushed into the gap, while the stage was given to what is otherwise invisible, the inside.

In this reversal of proportions, YRD.Works raise questions about how aestheticised spaces such as the white cube function and integrate visitors into their twisted staging. Various simultaneous sightlines within the installation produced a multi-perspective image that critically questioned the stage-like artificiality of exhibition spaces.
